## ABSTRACT:

PURPOSE: To obtain a hair-raising agent capable of effectively generating and growing hair by mutually and intermittently using the combination of a trichogenous agent and a hair-growing agent.

CONSTITUTION: The hair-raising agent comprises the combination of a trichogenous agent and a hair-growing agent wherein at least one of the agents is periodically and intermittently used for each half day to each month and wherein the hair-growing agent is mainly used. The trichogenous agent is preferably used in an interval not exceeding at least a resting time on the basis of the hair-growing agent used as the base agent. For example, the hair-growing agent and the trichogenous agent are used in a week day and in the week end, respectively, or the hair-growing agent and the trichogenous agent are periodically used at each morning and at each night, respectively. The main active ingredient of the trichogenous agent is fats and oils originated from a mammalian (e.g. horse fats and oils), or the high temperature hydrolysts of proteins and polysaccharides extracted from rice bran or wheat bran, and the main active ingredient of the hair-growing agent is the solvent extract of a galenical (e.g. *Glycyrrhiza glabra* or *Rheum*) containing a testosterone 5&alpha; reductase-inhibiting agent originated from the plant.
